b Based on the results of the partial Census of Production, 1929.
c Based on the returns furnished by the Revenue Officers for 1932.
d Based on an estimate of the Department of Agriculture: according to the partial Census of Production, 1929, the acreage was about 800,000, while according to the returns furnished by Government Agents to the Paddy Commission the extent under cultivation in 1930 amounted to 941,000 acres.
e Based on the Rubber Controller's Census of 1928, perhaps overstated. Owing to the slump in prices, possibly 50 per cent. of the acreage was not tapped.
f Based on various estimates. The partial Census of Production, 1929, showed about 450,000 but excluded small holdings.

N.B.—The figures for the provinces and districts are omitted as they are not considered sufficiently accurate for publication. The totals shown above are in several cases of doubtful accuracy.

LABOUR, WAGES, AND COST OF FOODSTUFFS, &c.

I.—LABOUR.

Classification.—Manual labour in Ceylon may be best considered under the following heads :—

(1) Unskilled—
  (*a*) Immigrant from India.
  (*b*) Indigenous.

(2) Skilled.

Skilled and Unskilled Labour.—The dividing line between skilled and unskilled labour is not always clear ; but the former term generally connotes work done with tools by skilled persons, such as artisans technically trained to use them. Unskilled work is also generally done by persons using tools, but of a simpler kind. Most agricultural manual work may be reckoned as unskilled, though such tasks as tea plucking or rubber tapping require considerable skill and experience.

General Legislation.—Ordinance No. 11 of 1865 applies to all contracts for hire and service, and section 3 setting out the standard contract in Ceylon reads :—

> " Every verbal contract for the hire of any servant, except for work usually performed by the day, or by the job, or by the journey, shall (unless otherwise expressly stipulated, and notwithstanding that the wages under such contract shall be payable at a daily rate) be deemed and taken in law to be a contract for hire and service for the period of one month, and to be renewable from month to month, and shall be deemed and taken in law to be so renewed, unless one month's previous notice or warning be given by either party to the other of his intention to determine the same at the expiry of a month from the day of giving such notice."

Contracts for hire and service must be in writing and signed before a Magistrate or Justice of the Peace, if the period for which they are made exceeds one month.

Section 27 dealing with sickness of employees reads :—

> " Any servant who shall be incapacitated by sickness from labour whilst in the service of any employer shall be entitled to lodging, food, as well as medical care, at the expense of such employer during such incapacity ; provided that the employer shall not be bound to pay to the servant during such period his wages in addition ; provided further, that nothing herein contained shall prevent the employer from determining the contract under the 10th section of this Ordinance in case the servant shall become permanently disabled from completing his contract."

In practice labourers who are ill receive free medical treatment at the Government hospitals and dispensaries with which Ceylon is liberally supplied.

There is no system in force resembling the National Health Insurance Schemes of other countries based generally on subscriptions from the State, employers, and workers.

There is no Ordinance dealing with the right of association or insurance against accidents, unemployment, old age, or old age pensions.

Washington Conventions.—Ordinance No. 6 of 1923 legalizes in Ceylon the Washington Conventions regarding the employment of women, young persons, and children in industrial undertakings. No Indian child under ten years of age can be lawfully employed to work on estates.

Unskilled Labour.—Unskilled labour in Ceylon may, for the sake of convenience, be considered under the heads estate and non-estate, each of which may be divided into immigrant and indigenous.

Estate Labour.

The immigration of labour from India to the estates in Ceylon is a movement of long standing, dating back to 1830 or earlier. The total resident estate population of Indian labourers is estimated to be about 650,600 (end of 1932).

Hours of Work.—Indian labourers on estates paid by the day must be paid overtime if they work more than eight hours a day as they are allowed one hour for a midday meal in the working day of nine hours as defined by law.

Wages.—The general average minimum wages, cash bonuses included, for the most unskilled time workers on the estates vary from 41 to 55 cents a day for men, 25 to 35 cents for women, and 20 to 35 cents for children. Some men earn up to 65 cents and women up to 50 cents a day at time work. More than half the work on estates is done on a piece work basis, and thereby many labourers are enabled to earn twice or three times the amounts earned at time work. The depression in rubber has restricted the earning powers considerably on rubber estates, where hitherto on a good estate a male rubber tapper could easily earn a rupee for half a day's work the natural reduction in rates has reduced this to 30 or 50 cents. Tea pluckers, generally women and girls, can earn a rupee a day during the seasons when leaf is most plentiful.

In addition to nominal or cash wages, labourers on estates receive bonuses as well as indirect wages such as free housing, free medical aid, free firewood, and free maternity benefit. On some estates they also have the free use of garden plots and get a free issue of cloths, and sometimes presents at festivals.

Legal Minimum Wage.—Legally binding minimum rates of wages were introduced on January 1, 1929, to protect the least skilled able-bodied workers from payment of wages below the average rates for such labourers and in a minority of cases below a fair wage. The rates introduced for time workers were :—

	Men. Cents.	Women. Cents.	Children. Cents.
Low-country .. .	41 ..	33 ..	24
Mid-country .. .	43 ..	35 ..	25
Up-country	49 ..	39 ..	29

together with issue of good unblended rice at Rs. 4·80 a bushel and a free issue of rice to widows with dependants and for non-working children. Boys above 16 or girls above 15 are reckoned as men and women respectively.

Housing.—Estates which house their labour forces are bound by law to erect sanitary lines or living rooms made of permanent materials and properly drained, lighted, and ventilated, and Inspecting Medical Officers administer estate housing law. The result is that from 1922 to the end of 1931 about 180,000 rooms up to the Government standard were built on estates at a cost of about Rs. 65,000,000. This revolution in the housing of estate labour is one of the most satisfactory achievements that the Ceylon planters have accomplished in recent times. The average number of residents per room on estate lines is now 3 and there is little overcrowding.

There are also about 68,800 latrines on estates employing Indians and a pipe-borne water supply for about 157,000 rooms.

Medical Aid.—In the case of Indian estate labour Ordinances No. 9 and No. 10 of 1912 impose on planters the legal duty of providing medical aid for such labour and free maternity benefit. Employers of Indian labourers on tea, rubber, and cacao estates alone pay for the medical wants of their labour and these estates have contributed large sums on account of the medical aid of Indian labourers.

Department of Labour.—The Department of Labour controls the recruitment of Indian labourers, and administers "The Immigration Fund," from which are met various expenses in respect of the recruitment, repatriation of labourers, and other matters. The Administration Report of the Controller may be referred to for fuller details with regard to immigrant labour.

Indigenous Labour on Estates.

The indigenous estate labour, in general, differs chiefly from the immigrant labour in that it is not resident The Sinhalese who form most of the indigenous labourers on the estates are usually drawn from the surrounding villages, and are consequently less amenable to estate discipline. Having other interests and possibly other means of livelihood, they are for the most part less regular in attendance than the Indian Tamils. But excellent results can be obtained with indigenous labourers, particularly if they are housed on the estates. The numbers of indigenous labourers employed on estates are increasing, but they do not at present amount to more than 14 per cent. of the total labour force.

Non-Estate Labour.

Non-estate labour is of many different kinds; considerable numbers of immigrant labourers, mainly unskilled, are employed by Government Departments, such as the Public Works, Railway, Harbour Works, and others, by local bodies, by private firms, &c.

The general conditions in Government service are governed by provisions decided upon on the advice of the Labour Advisory Committee. This Board also on occasion informally fixes rates of pay per hour in workshops, and its ruling is generally acted upon.

Two schedules of the classification of daily and hourly paid labour drawn up by the Labour Advisory Committee and sanctioned by Government in 1927 are given below :—

	Rates per Hour. Minimum. Cents.	Maximum. Cents.

Many indigenous labourers are similarly employed. In addition they supply a large proportion of the skilled labour, such as carpenters, blacksmiths, masons, &c. Their rates of pay differ according to age and skill from 60 cents to Rs. 8·10 a day. They are also employed in plumbago mines, cleaning sheds, mills of various kinds, the manufacture of copra, coir, &c. But the greatest numbers according to the Census of 1921 were cultivators of paddy amounting to about 417,000 persons. Most of them cultivate their own lands or help in the cultivation of others' lands on varying terms. Others earn from 15 cents to Rs. 2 a day according to age and sex. Many of these occupations are unorganized, and no general statement can be made about their hours and conditions of work.

The conditions of non-estate labour are in certain cases unsatisfactory in respect of wages paid, housing provided or available, &c. Attention is being given to these matters, but the difficulties experienced elsewhere are being met with.

METEOROLOGY.

General Remarks.—There is a marked variation in climate between the different parts of Ceylon. In the low-country, with a mean temperature of the order of 80°F., a noticeable feature is the small range of both temperature and pressure. There is, however, wide divergence between the moist conditions in the south-west of the Island, where the average annual rainfall varies from 100 to over 200 inches, and the dry zone areas of the north, north-west, and south-east, where several stations have annual averages of less than 40 inches.

Inland, with altitudes up to over 8,000 feet, a cooler climate is experienced, with a corresponding change in vegetation and an increased range of temperature.

Rainfall.—The chief features of the year were the widespread deficits during January and the first half of February; absence of well-developed thunderstorm activity during March and April; a weak south-west monsoon; and heavy rain in the north of the Island in November, largely due to the influence of two depressional storms that formed in the Bay of Bengal during the month.

The rainfall totals for the year were below average, except in the north and west of the Island. St. Martin's estate, with a total 56 inches below its average, recorded the largest deficit. The highest rainfall total in 1932 was 214·25 inches at Hiniduma. Ingoya came next with 210·36, while other amounts over 200 inches were Watawala 209·00, Kuruwita 205·85, and Theydon Bois estate 205·08. The highest averages (10 years and over) were Carney estate 231·65, and Blackwater estate 230·51 inches. The lowest totals for the year were Yala 23·84, Migahajandura 26·82, and Kudawewa 27·72 inches, while the lowest averages (10 years and over) were Marichchukkaddi 35·32, Ponparippu 38·61, and Mannar 38·93 inches.

Temperature.—The low-country stations with the highest and lowest mean shade temperatures for 1932 were Trincomalee with 81·5°F., and Galle with 79·7°F. The figures for Colombo and Kandy were 80·3°F. and 76·2°F., respectively, while Nuwara Eliya at an elevation of 6,000 feet, had a mean shade temperature of 59·0°F. The highest shade temperature recorded during the year was 97·7°F. at Batticaloa, on June 13 and July 16, while the highest on record is 103·7°F. at Trincomalee, on May 12, 1890. The lowest this year at low-country stations was 59·9°F. at Anuradhapura, on February 5, while 29·1°F. was recorded on February 11, at Nuwara Eliya, at which station 27·1°F. was recorded in 1914. The highest shade temperature in Colombo in 1932 was 94·0°F. on January 25, and the lowest 61·7°F. on February 5. The mean daily range for 1932 (the difference between the mean of the maximum and the mean of the minimum) was highest at Badulla and Nuwara Eliya, 17·5°F. and lowest at Galle 8·8°F. At Colombo and Kandy it was 11·1°F. and 14·8°F. respectively. The absolute range for the year (the difference between the highest and the lowest readings actually recorded at any one station) was greatest at Nuwara Eliya, 46·3°F., and lowest at Galle, 22·4°F.

The thermometers at all the climatological stations in Ceylon are now exposed in large sized Stevenson Screens. At Hakgala, where the change was effected last, a screen was taken into use in March this year.

Temperature averages, as in the previous report, are taken entirely from screen readings, except for Hakgala. At this station, on account of the uncertainty of shed-to-screen correction, the shed averages given in last year's report have been carried forward by the inclusion of this year's figures, without making allowance for the difference in exposure. As a result the offsets from average are not strictly comparable throughout the year, but comparisons between shed and screen during the months when parallel readings are available show that errors due to this cause are only small.

In the above table the tendency for both extremes to occur at the same time of year is noteworthy, and calls attention to the fact that in the tropics variations in cloudiness have a greater importance relatively to variations in the sun's declination than is the case in the temperate zones.

TABLE VIII.—Average Percentage Humidity from Dry and Wet-bulb readings at 9.30 A.M. and 3.30 P.M. together with the offsets of the 1932 Values from these Averages.

The averages are taken from observed values, whether shed or screen. Errors caused by the imperfections of the shed exposures are too small to justify the deletion of shed values as yet.

TABLE IX.—Average Percentage Humidity from the Minimum readings of the dry-and wet-bulb thermometers, together with the offsets of the 1932 values from these averages. These minima do not necessarily occur at the same instant, and a consequent uncertainty is introduced. The evidence of thermographs shows that this uncertainty is very small, and the publication of this table seems desirable owing to the fact that the humidity at night differs considerably from that by day, and hence table VIII. alone gives a very incomplete statement of conditions as a whole.

TABLE XI.—Offsets of the 9·30 and 15·30 Air Pressure Readings of the Year 1932, from the Average, expressed in decimals of an inch of mercury.

Taking one millibar as roughly equal to 0·03 inch of mercury, it will be seen that there are comparatively few offsets of as much as a millibar.

TABLE XIII.—Percentage of Wind Directions in 1932. Average values of frequencies are not given in this Report owing to the exigencies of space, but can be seen in the 1926 Report. Observations are made to sixteen points, but are summarized here in terms of eight points only.

It will be noticed that in some cases these percentages do not add up exactly to 100. This is because each percentage is taken to the nearest unit only, and it may happen that the approximations are mostly upwards or mostly downwards.

Table XIV.—High velocities of wind at Colombo (Pilot Station). A Dines pressure anemometer is in use at the Pilot Station, on the south-west breakwater of the Harbour. The height of the vane is 15 feet above the dome of the roof of the station, and about 80 feet above the surface of the water.

Data from this instrument are tabulated as follows :—The day is divided into two-hourly intervals, centred at the odd hours, and all such intervals, during the year, in which the wind, in any part of the interval reached a value of 30 miles per hour or over, are indicated in the table by the date, and the general direction of the heaviest gusts. When the wind reached the "gale" line (38 miles per hour or over) the date and wind direction are shown in italics, and cases in which the high wind was accompanied by a sharp change in direction are denoted by a (*).

The highest velocity recorded during each month, with date and time, is shown in the last column.

The anemometer was out of action occasionally for short intervals, but comparison with charts from another instrument in the Fort indicates that loss of data from this cause is inappreciable.

The times given are in Ceylon standard time, 5½ hours ahead of Greenwich.

TABLE XV.—Maximum amount of rain falling in any periods of 1, 2, 3, 4, &c., consecutive days, during the year 1932, for selected stations. The periods of consecutive days are given between 10 and 20 by steps of 2, between 20 and 32 by steps of 3, between 32 and 40 by steps of 4, and above 40 by steps of 5.

The figure under each number represents the maximum amount of rain falling on that number of consecutive days during the year, the different figures for each station not necessarily referring to the same wet spell. For example, at Watawala the highest fall on any 3 consecutive days was 9·40 inches, in October, while the highest fall on any 4 consecutive days was 11·60 inches, in May.

The series is terminated for each station when the intensity of the rain finally falls below 2 inches per day. In the case of wet spells commencing in December and lasting into January, the total rainfall in any particular group of consecutive days is considered as belonging to that year in which the greater part of the rain fell. There were no cases of that kind this year.

The rainfall day is not the calendar day, but from the observation of one morning to that of the following morning (even in the case of stations at which pluviograph records are available), and the rainfall year ends with the morning observation of January 1, 1933.

TABLE XVIII.—Highest Intensities of Rainfall recorded in 1932.

These are expressed by giving for each month the shortest times in minutes taken for the precipitation of 0·4, 0·8, 1·2, &c., inches of rain.

The figures in brackets give the number of separate rainstorms in each month in which the amount of rain specified at the head of the column fell at a rate of at least one inch per hour. Where no figure is given in brackets the figure 1 may be understood.

TABLE XIX.—Incidence of Drought at selected Stations.

This table is of the same form as in last years' report. The definitions adopted e as before those used in " British Rainfall," the rainfall annual of the British Meteorological Office. They are as follows :—

Absolute Drought.—Any period of 15 days or more in which no rain is recorded.

Partial Drought.—Any period of 29 days or more over which the mean daily rainfall does not exceed ·01 inch per day, *e.g.*, a total fall of 0·37 inch or less in 37 days would qualify that period as a partial drought.

Dry Spell.—Any period of 15 days or more in which the rainfall on no day exceeds ·03 inch.

In practice it will generally be found that most of the days of a dry spell are rainless days.

All *absolute droughts*, *partial droughts*, and *dry spells* occurring during the year at certain selected stations are shown in the Table. (In the case of a drought beginning in one year and ending in the next, it is credited to the year that contains the longer part of the drought). In addition, a *day of drought* has been defined as any day included in either, or both, a dry spell and a partial drought, and the total number of *days of drought* comprised within the tabulated droughts has also been tabulated, as an index of the droughtiness of the year at the station concerned. (This number is not necessarily quite the same as the total number of *days of drought* within the calendar year).

It sometimes happens that a day of appreciable rain occurs at the beginning or end of a partial drought. It is, however, included in the drought if its inclusion does not bring the mean daily rainfall over ·01 inch.

The selected stations are Colombo and all daily reporting stations, the meteorological stations at Ridiyagama and Tabbowa, and the rainfall station at Labugama, the observations from which are checked by pluviographs, and the meteorological stations at the Botanical Gardens, Hakgala, and the Research Institutes of St. Coombs, Talawakele, and Culloden, Neboda.

II.—Harbour Facilities.

Colombo Harbour.

There are no enclosed wet docks. Vessels lie at moorings in the shelter of the breakwaters, and are loaded or discharged from lighters.

There are six berths available during the south-west monsoon and six during the north-east monsoon for vessels drawing up to 33 feet of water; the area being deepened to 36 feet below low water ordinary spring tide, for vessels of 33 feet draught, is being extended. The Port can accommodate 36 vessels in the north-east monsoon, and 40 vessels in the south-west monsoon, excluding accommodation at the Graving Dock Guide Pier and Oil Jetties.

There are three oil jetties and one pier available for shipping as follows :—

Discharge Jetty, where vessels of 500 feet length and 27 feet draught can be berthed.
Outer Bunkering Jetty, where vessels of 500 feet length and 27 feet draught can be berthed.
Inner Bunkering Jetty, for bunkering barges only.
Graving Dock Guide Pier, length 800 feet, at present available for vessels of 29 feet draught for a length of 480 feet and of 27 feet draught for the remainder when not required for docking purposes.

In addition to the Graving Dock, there is a Patent Slip capable of taking vessels up to 1,200 tons dead weight. The Port is equipped with a thoroughly up-to-date Oil Installations Depôt, which is directly connected with the Harbour front by pipe lines. Ships bunker either at the Graving Dock Guide Pier and Oil Jetties or in the stream from barges.

Galle Harbour.

There are seven berths accommodating vessels up to 450 feet in length and 27 feet draught.
Ships are moored head and stern with their own bower anchors and stern moorings supplied by the Harbour authorities.
Cargo is landed by means of lighters at three piers, which have depths of up to 6 feet alongside.
The anchorage is exposed, particularly during the south-west monsoon.
Pilotage is compulsory.
Ships are taken out, but not brought in during the night.

Trincomalee Harbour.

The maximum depth of water available at the Customshouse Jetty ordinary low spring tide is 6 feet 4 inches and of China Bay is 10 feet.

The length of the Customshouse Jetty is 300 feet and that of China Bay is 397 feet.
